

Scope of Work (SOW)

Project: Multi-Verification API Integration in Software Platform

1. Project Overview

The project involves **integration of multiple third-party verification APIs** into an existing or new software platform to enable **customer identity, financial, employment, banking, and business verification**.

The solution will support **real-time verification**, secure data handling, audit logging, and compliance with applicable regulatory guidelines.

2. Project Objectives

- Integrate multiple verification APIs into a single unified platform.
 - Enable seamless customer KYC and due-diligence processes.
 - Reduce manual verification efforts and fraud risk.
 - Ensure secure, compliant, and scalable API-based verification.
 - Provide standardized responses and reporting within the software.
-

3. Scope of APIs to be Integrated

3.1 PAN Card Verification API

- PAN number validation
 - Name & DOB matching
 - PAN status verification (Active/Inactive)
 - Income Tax database validation
-

3.2 Aadhaar Verification API

- OTP-based Aadhaar authentication
 - VID verification
 - Demographic validation
 - Aadhaar masking & consent handling
-

3.3 RC (Vehicle Registration) Search API

- Vehicle registration number validation
 - Owner name verification
 - Vehicle details (type, fuel, registration date)
 - Registration & insurance status
-

3.4 Employment Verification API

- Employer name verification
 - Employment status confirmation
 - Tenure verification
 - Corporate employment database validation
-

3.5 GST Search API

- GSTIN validation
 - Legal business name verification
 - GST registration status
 - Filing status & registration date
-

3.6 Driving Licence Verification API

- DL number validation
 - Name & DOB matching
 - Licence validity & class
 - RTO details
-

3.7 Bank Account Verification API

- Bank account number & IFSC validation
 - Account holder name verification
 - Penny-drop / equivalent verification
 - Account status confirmation
-

3.8 Voter ID Search API

- EPIC number validation

- Name & age verification
 - Constituency details
-

3.9 Face Match / Face Verification API

- Face match between selfie and ID document
 - Liveness detection
 - Match confidence score
 - Fraud risk indicators
-

3.10 Passport Verification API

- Passport number validation
 - Name & DOB verification
 - Passport status (Valid/Expired)
 - Issuing authority verification
-

3.11 MSME (Udyam) Verification API

- Udyam Registration Number validation
 - Enterprise name verification
 - MSME classification (Micro/Small/Medium)
 - Registration status & date
-

3.12 Company Verification API

- CIN / LLPIN validation
 - Company legal name verification
 - Company status (Active/Inactive)
 - Director / partner details
 - MCA database validation
-

4. Functional Scope

4.1 API Integration

- Secure integration of all listed APIs.
 - Standardization of request/response formats.
 - Error handling and retry mechanisms.
 - Timeout and fallback handling.
-

4.2 User Interface Integration

- Verification screens within the software.
 - Manual and automated verification triggers.
 - Display of verification results and status.
 - Remarks and exception handling.
-

4.3 Workflow Management

- Configurable verification workflows per use case.
 - Conditional checks based on customer profile.
 - Auto-flagging of mismatches and high-risk cases.
-

4.4 Reporting & Audit

- Customer-wise verification reports.
 - API usage and success/failure logs.
 - Audit trail for compliance review.
 - Export reports in PDF/Excel format.
-

5. Technical Scope

5.1 Architecture

- REST-based API integration.
 - Secure backend services.
 - Scalable and modular architecture.
 - Cloud or on-prem deployment (as agreed).
-

5.2 Security & Compliance

- HTTPS / SSL encryption.
 - API key / token-based authentication.
 - Role-based access control (RBAC).
 - Data encryption at rest and in transit.
 - Compliance with RBI, UIDAI, IT Act & data protection norms.
-

6. Testing & Quality Assurance

- API integration testing.
 - Data validation testing.
 - Performance & load testing.
 - User Acceptance Testing (UAT).
-

7. Deliverables

- Integrated verification APIs within the software.
 - Unified verification dashboard.
 - API integration documentation.
 - Sample request/response mappings.
 - Deployment & configuration guide.
 - Go-live support.
-

8. Exclusions

- Direct ownership of government or bureau databases.
 - Physical or field verification.
 - API subscription/license costs (unless specified).
 - Loan approval or decision-making logic.
-

9. Project Timeline (Indicative)

- Requirement finalization: 1 week
- API integration & development: 3–4 weeks
- Testing & UAT: 1–2 weeks

- Go-live & support: 1 week
-

10. Success Criteria

- Successful integration of all listed APIs.
 - $\geq 99\%$ API success rate.
 - Secure and compliant implementation.
 - Accurate verification results with audit logs.
-

11. Optional Enhancements

- Bulk verification (batch APIs).
- Webhooks for async responses.
- Risk scoring engine.
- SLA-based monitoring dashboard.
